

CEETC

CONTINUE ENGINEERING EDUCATION AND TRAINING CENTRE UET NEW CAMPUS LEAN LEADERSHIP

LEAN THINKING

COURSE OUTLINE

Transforming an organization's performance usually means changing its culture—and that means its leaders must change how they lead. Mastering lean leadership and lean culture is essential to your success as a manager and your company's success. There are two major principles of lean: Respect for People and Continuous Improvement. This course, based on years of field experience, shows you how to implement both principles in your organization. Lean is eliminating waste and the disciplined method of optimizing value to customers. It is creating a culture that brings out the best in all employees. If you do this... you will succeed as a leader in your organization!

What will you learn

- This course is about leadership - you will know how to lead a change process in your organization.
- What it takes to drive a Lean transformation and build a culture of continuous improvement - how new technologies impact traditional lean practices
- You will be able to identify and eliminate waste and engage your team members in an on-going process of continuous improvement (kaizen).
- Why Lean is a key driver for sustainable competitive advantage
- How different companies can leverage Lean to create value both in manufacturing and services

WHO SHOULD ATTEND

This course is designed for any manager, team leader, or anyone aspiring to improve the performance of his or her organization.

Highly recommended for Senior Management and Mid-Senior Management who has potential to go for leadership roles in future
